

# Enhancing Productivity Growth

Philippe Aghion

## Basic questions

- How to enhance productivity growth in advanced and in emerging market economies?

## Schumpeterian growth theory

- Long-run growth driven by innovations
- Innovations result from entrepreneurial activities motivated by prospect of innovation rents
- Creative destruction: new innovations displace old technologies

# Appropriate growth policies

- During the post-war period, growth in European countries was driven by imitation
- Over time, and particularly with globalization, innovation has become the driving force of growth in developed economies
- Innovation requires flexibility and turnover, and different policies and institutions

## Enhancing productivity growth in advanced countries

- Investment in higher education
- Liberalization of product market
- Liberalization of labor market
- Equity financing

## First pillar: Competition

- Competition/entry is more growth-enhancing for countries or sectors that are closer to technological frontier

## Three fallacies about competition policy

- Competition policy would counteract effects of patent policy: in fact the two policies are complementary
- Competition policy goes against any form of industrial policy: in fact the two are complementary
- Competition policy works independently of institutions: in fact corruption limits competition

## Second pillar: education and universities

- Need good primary/secondary education...importance of good PISA performance
- Having well-ranked universities is more growth-enhancing closer to technological frontier....importance of good Shanghai rankings

**Fig. 3**  
**Long-term growth effects of \$1000 per person spending on education, US States**

Source: Aghion, Boustan, Hoxby and Vandebussche (2005)

## Third pillar: Labor market flexibility: “flexsecurity”

- Labor market flexibility is more growth enhancing the closer a country is to the technological frontier

EPL

Variable	eq1	eq2	eq3	eq4	eq5
Leader MFP growth	0.02949	0.02996	0.02830	0.02813

## Fourth pillar: Finance

- As country moves closer to frontier, needs to rely more on equity finance and stock markets
- Reason is that innovative investments are more risky and therefore investors require both, to get a share of upside returns and to get control rights (Aghion-Bolton, 1992; Kaplan-Stromberg 2002).

Panel : Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Ireland, Iceland, Italy, Japan, Korea, the Netherlands, Norway, Portugal, Spain, Sweden, the United Kingdom and the United States.

Times period : 1995-2007

Dependant variable : Hourly labour productivity growth (instrumental variables method)

	(1)	(2)	(3)	(4)	(5)
Changes in capacity utilization rate	0.00200*** (0.000622)	0.00190*** (0.000499)	0.00161*** (0.000475)	0.000908 (0.000648)	0.000634 (0.000702)

Enhancing productivity growth in  
emerging market economies

# Enhancing productivity growth in emerging market economies

- Foster technology transfers
- Reallocate factors
- Improve management practices

# DISTRIBUTION OF PLANT TFP DIFFERENCES IN US VS. INDIA

## HIGHER US TFP DUE TO REALLOCATION - THINNER "TAIL" OF LESS PRODUCTIVE PLANTS

Source: Hsieh and Klenow (2009); US mean=1

# Wide variation in management: US and Japan leading, developing nations trailing (includes 2013 wave)

# Average management scores across countries are strongly correlated with GDP per capita

Data includes 2013 survey wave as of 9/20/2013. Africa data not yet included in the paper

# Technological waves

# Technological waves

- Drawn from Gilbert Cetto et al (2014)
- Productivity over the period 1890-2012
  - Using annual and quarterly data
  - From the end of the Long Depression to the Great Crisis
- 13 advanced countries
  - G7: US, UK, Japan, France, Germany, Italy, Canada
  - Spain, The Netherlands, Finland
  - Australia, Sweden, Norway
  - +reconstituted Euro area
- Labor Productivity and TFP

# 1. Two productivity growth waves in US

# Two productivity growth waves

# Two productivity growth waves

- 1<sup>st</sup> productivity growth wave:
  - 2<sup>nd</sup> industrial revolution: electricity, internal combustion engine, chemistry, communication (Gordon, 2000)
  - But also organizational change and financial development (Ferguson and Washer, 2004)
  - Long lag in diffusion: cf. electricity (David, 1990)
- 2<sup>nd</sup> productivity growth wave: ICT
  - Smaller wave
  - Ended?

2. In other countries, delayed productivity growth waves (if any)

# Delayed productivity growth waves in other countries

# Delayed productivity growth waves in other countries

# Delayed productivity growth waves in other countries

- 1<sup>st</sup> productivity growth wave:
  - Hitting the euro area, Japan and UK after WWII
- 2<sup>nd</sup> productivity growth wave:
  - Absent so far in the euro area and Japan
  - Slow ICT diffusion: Role of market rigidities / education?

# Productivity breaks: global shocks

## Labor productivity

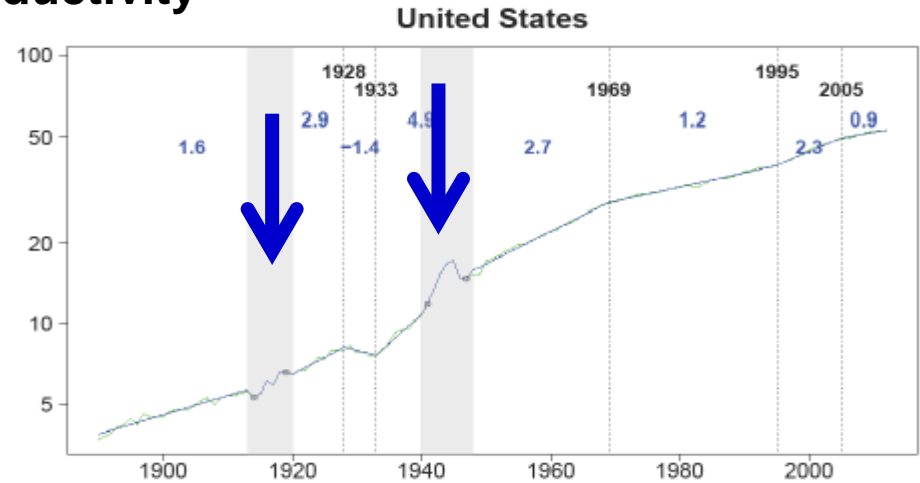

US\$ PPP of 2005 (log scale)

Areas in grey: war periods

# Productivity breaks: global shocks

## Wars

### Labor productivity

US\$ PPP of 2005 (log scale)

Areas in grey: war periods

# Productivity breaks: global shocks

## Global financial crisis

### Labor productivity

US\$ PPP of 2005 (log scale)

Areas in grey: war periods

# Productivity breaks: global shocks

## Global supply shocks

### Labor productivity

US\$ PPP of 2005 (log scale)

Areas in grey: war periods

# Global Productivity breaks

- **Due to wars, but in a divergent way:**
  - Upward level break for the United States
  - Downward for France, Germany and Japan
- **Due to the Great Depression, but very different recovery:**
  - Most countries affected (except Japan, Italy and the UK)
  - Exit through war for most countries
  - But stronger rebound in the US and Canada
- **Due to global supply shocks**
  - Generalized impact of the first oil shock
  - But different timings: US 1966/69

## 4. Country-specific productivity breaks due to idiosyncratic shocks

# Productivity breaks: country-specific shocks Sweden

## Labor productivity

## Total Factor Productivity

US\$ PPP of 2005 (log scale)

Areas in grey: war periods

# Productivity breaks: country-specific shock Japan

## Labor productivity

## Total Factor Productivity

US\$ PPP of 2005 (log scale)

Areas in grey: war periods

# Country-specific productivity breaks

- Due to policy shocks/structural reforms:
  - Canada or Sweden 1990s
  - The Netherlands, 1983

# Country-specific productivity breaks

## ➤ Reformers

- **Netherlands:** Wassenaar agreement, 1982
  - TFP growth : 1977-1983 0,5 %, 1983-2002 1,5 %
- **Canada,** reforms initiated in early 1990s
  - TFP growth: 1974-1990 0,3 %, 1990-2000 1,1 %
- **Australia,** reforms initiated in early 1990s
  - TFP growth: 1971-1990 0,4 %, 1990-2002 1,4 %
- **Sweden,** reforms initiated in early 1990s
  - TFP growth: 1976-1992 0,4 %, 1992-2008 1,9 %

## Conclusion (1)

- Long-run productivity
  - Role of product and labor market flexibility, of higher education, and of equity financing in developed economies
  - Role of reallocation and management practices in emerging market economies (education, credit, corruption)
- Waves
  - Leader and followers
  - Major role of wars and supply shocks
  - Interaction with structural reforms

## Conclusion (2)

- A new Growth Pact for Europe:
  - Structural reforms in exchange for more macroeconomic flexibility
  - Use structural funds to encourage structural reforms
  - New European industrial policy
