

TRACKING FINANCE FLOWS FOR CLIMATE CHANGE ADAPTATION

The 2015 Paris Agreement calls for finance flows to be made consistent with climate-resilient development pathways. Multilateral development banks (MDBs) and members of the International Development Finance Club (IDFC) will share the lessons learned on tracking and reporting adaptation finance, and mainstreaming adaptation into development operations that they have accumulated over three years of implementing their Common Principles for Climate Change Adaptation Finance Tracking. This event will be of interest to a range of public and private organisations working on adaptation finance, climate finance and sustainable finance more broadly.

Moderator

Barbara Buchner
Climate Policy Initiative
