European Investment Bank 98-100, boulevard Konrad Adenauer L-2950 Luxembourg

In nature, no organism exists without some relation to another one. Oxpeckers nourish themselves on the parasites they clean from the fur of a zebra. A clownfish shelters among the tentacles of an anemone, while fertilising it with its waste. Plovers clean the teeth of the Nile crocodile and, in doing so, feed themselves. The covers of our reports highlight these symbiotic, natural relationships this year, because they mirror the different levels on which each European Investment Bank project operates. When we finance infrastructure or innovation, we seek also to ensure that the project bolsters climate action or environmental sustainability. By investing in startups or green energy, our public finance encourages private investment that might otherwise have been withheld. In a world where humanity seems so often to be at odds with itself, we hope these images of natural collaboration will inspire readers to cross boundaries and build new partnerships.

About the report

The European Investment Bank (EIB) has pioneered sustainability reporting for well over a decade, placing a strong emphasis on transparency, accountability and stakeholder engagement.

Since 2007, the EIB has issued its Sustainability Report and the related Sustainability Reporting Disclosures, which apply the standards set out by the Global Reporting Initiative. With this report, prepared in accordance with the Sustainability Accounting Standards Board (SASB) framework, the EIB offers the reader an additional viewpoint on EIB activities based on a different standard, which focuses on those elements that can have a direct financial impact on our organisation.

In preparing this report, the EIB updated the materiality assessment carried out in 2018 in accordance with the SASB framework. The approach utilised a decision-making tool, the SASB five-factor model, to evaluate potentially material topics as specifically applied to the EIB.

The EIB commissioned its external auditors, KPMG, to provide limited assurance on selected statements and figures in the SASB Report. These statements are marked with \square and printed in *italics*.

We trust readers will find the information in this report interesting and relevant. We welcome any comments or questions, which should be addressed to sustainability@eib.org

INCORPORATION OF ESG FACTORS IN INVESTMENT BANKING AND BROKERAGE ACTIVITIES

METRIC:

FN-IB-410a.2

ESG integration

100% of EIB investments incorporate environmental, social and governance (ESG) factors. EIB financing in 2023 amounted to €75.1 billion \square .

For a breakdown by sector, please see FN-IB-000.B.

METRIC: FN-IB-410a.3

Sustainability due diligence

The EIB carries out a three-step sustainability due diligence on all the investment projects it finances in terms of their sustainability credentials such as environmental, social and governance aspects. Certain activities are completely excluded from EIB financing. All projects supported must meet the EIB Environmental and Social Standards.

Furthermore, the EIB makes a separate economic appraisal of investment projects to assess their costs and benefits to society at large. This considers the human, technological or natural resources used by the project, often using shadow costs — including for carbon — and gauges its value for all stakeholders to determine whether society at large gains from the investment.

An economic appraisal is often needed because markets are not always sufficiently competitive, prices are often distorted, and property rights are at times not well defined, leaving externalities such as carbon emissions without an (appropriate) price assigned to them. A project's financial return may, therefore, not be an adequate indicator to demonstrate the impact on society.

Only projects that pass both the financial screening and the separate sustainability due diligence can be financed by the EIB.

In addition to our well-established sustainability due diligence process, since 2021 our new projects and operations have been aligned with the Paris Agreement, and we no longer support projects not aligned with its goals, such as airport expansions or new conventional, energy-intensive industrial plants.

BUSINESS ETHICS

MFTRIC:

FN-IB-510a.1

Monetary losses as a result of legal proceedings

The EIB has no monetary losses recognised in its 2023 accounts as a result of legal proceedings associated with fraud, insider trading, anti-trust, anti-competitive behaviour, market manipulation, malpractice or other related financial industry laws or regulations, based on the materiality aspect for the annual financial statements.

METRIC:

FN-IB-510a.2

Whistleblowing Policy

The EIB Group Whistleblowing Policy is a key element to safeguard and enhance the Bank's integrity and transparency. The policy underpins the systems the Bank has in place to combat practices that might damage its activities and reputation. It applies to all EIB staff members and any other person working for the EIB, including consultants and other service providers as set out in their contractual agreements with the EIB. Additionally, the Whistleblowing Policy now provides for the possibility to receive reports from external reporting persons.

The EIB Group Whistleblowing Policy enables any relevant persons to report misconduct. It does so by setting out clear reporting lines, ensuring maximum protection for any whistleblower acting in good faith, for any person who supports the whistleblower and for any person associated with a whistleblower (i.e. a relative, partner or spouse working at the EIB), granting information rights to the whistleblower, and condemning any retaliatory action or reprisals. This covers alleged fraud, corruption, money laundering or financing of terrorism, as well as any failure or infringement of ethics or integrity. The Whistleblowing Policy also extends the protection offered to external reporting persons, by ensuring their confidentiality and the potential prohibition of any acts of retaliation to the extent that these are committed by persons subject to the various EIB Group codes of conduct.

Aside from its designated internal and external reporting channels (see Article 5 of the policy, Reporting channels), the possibility of public disclosure has also been introduced, dependent on a number of cumulative conditions:

- a. that such reporting is necessary to avoid a significant threat to the financial interests of the European Union; and
- b. that the whistleblower has already issued a report to the internal and/or external reporting channels, without having received written feedback; and
- c. that the whistleblower did not accept any payment or other benefit for such reporting and the reporting does not cause the EIB to violate its obligations to protect the confidential information of another party.

For more information, please see the EIB Group Whistleblowing Policy.

SYSTEMIC RISK MANAGEMENT

METRIC:

FN-IB-550a.1

Buffer for systemic relevance

Although the EIB is not identified as a global systemically important bank (G-SIB) by the Financial Stability Board, as a matter of prudence the Bank has decided to provide for an additional buffer for systemic relevance of 1.0% CET (common equity tier 1). The EIB's self-imposed buffer for systemic relevance is based on its own, independent decision.

MFTRIC:

FN-IB-550a.2

Systemic risk management

The EIB implements a holistic capital planning and management process which ensures that its operations are compatible with its risk appetite, on both an historical and a forward-looking basis. The Bank uses various capital metrics, including regulatory capital, to assess the adequacy of its capital base and to determine the available capital for its new business activities. In the context of its annual Operational Plan, the Bank prepares projections of key capital metrics to ensure that the proposed business plan is sustainable from a capital perspective. The capital management and planning framework also incorporates regular stress tests and sensitivity analyses, to test the EIB's resilience to both systemic and idiosyncratic stresses.

For more information, please see the EIB Group Risk Management Disclosure Report 2023.

DATA SECURITY

METRIC:

FN-CB-230a.1

Cybersecurity attacks or breaches

The Bank did not record any material instances of breach by unauthorised third parties in 2023. However, an attack targeting the Bank in June 2023 caused the partial unavailability of its corporate website for several days, reflecting the geopolitical tensions that Europe has been facing over the last year. Significant improvements were made to several IT controls in order to mitigate similar risks in the future.

METRIC:

FN-CB-230a.2

Data security risks

In response to growing and evolving global cybersecurity threats, the Bank is putting in place what it considers to be measures appropriate for its business, and remains on heightened alert to such risks. The Bank has implemented a formal cybersecurity risk management framework that protects its critical IT infrastructure while adhering to EU and Bank policies on privacy and civil liberties. This policy framework has been embedded into the governance

structure so that senior management receives regular reports on developments and metrics. The policy framework is regularly updated to reflect best practice and the risk appetite.

Ongoing technical and non-technical initiatives, cyber resilience assessments, risk assessments of new IT solutions, mainstreaming of simulations, training and compliance ensure the continuous development of policy measures and adherence to them. The management of cybersecurity risks is largely addressed by available in-house expertise and contracted external support or guidance, as required.

Throughout 2023, internal information and communication technology (ICT) controls were thoroughly applied, which was confirmed by an annual self-assessment on the design effectiveness of general internal ICT controls.

FINANCIAL INCLUSION AND CAPACITY BUILDING

METRIC:

FN-CB-240a.1

Financing small and medium enterprises

In 2023, the EIB provided financing to intermediaries in support of SMEs and mid-caps for a total amount of €15.01 billion. ☐ In the same year, more than 71 450 SMEs and mid-caps were granted new loans through EIB financing.

SMEs are micro, small and medium-sized enterprises employing up to 249 employees, in alignment with EU Recommendation 2003/361/EC. Mid-caps are enterprises with 250 to 3 000 employees.

COMMUNITY RELATIONS

METRIC:

RT-CH-210a.1

Engagement with communities

The EIB attaches great importance to engaging with civil society and to building cooperative relations with citizen organisations. The active dissemination of information, constructive dialogue and partnership with civil society organisations are essential to informing the public, building trust in the EIB and improving the sustainability and quality of the projects it finances. As a public institution, the EIB actively promotes the right to access information, engages with civil society and builds cooperative relations with its representatives. The Bank engages with its stakeholders in a variety of ways:

- Every year, it invites civil society stakeholders to participate in a seminar with its Board of Directors; please see here for more information on the EIB Board of Directors' Seminar with Civil Society 2023.
- It organises public consultations on its key policies, which give stakeholders the opportunity to help shape the EIB's key institutional and thematic policies while giving the Bank the opportunity to explain how and why decisions are made.
- It regularly hosts events to explain what it is doing, to explore emerging issues and to benefit from the feedback and ideas of civil society.
- It creates partnerships with civil society organisations on topics of relevance to EIB priorities.

For more information, please refer to the EIB's engagement with civil society — 2023 highlights.

In the Bank's financing, we apply the EIB Environmental and Social Standards. Standard 2 of the new EIB Group Environmental and Social Sustainability Framework promotes an inclusive and systematic approach to engaging constructively with stakeholders. It acknowledges stakeholder engagement as essential for the effective assessment, management and monitoring of environmental, climate and social impacts and risks, and to ensure that projects are sustainable and deliver better outcomes. This standard outlines the promoter's responsibilities for implementing continuous and transparent engagement with project stakeholders.

In addition, the EIB Institute promotes and supports social, cultural and academic initiatives with EU Member States. It is a key pillar of the Bank's engagement with citizens. For more information, please visit the EIB Institute website.

CLIMATE ACTION

MFTRIC:

IF-HB-420A.2

Climate Strategy

The EIB is the European Union's climate bank. Our Climate Strategy defines our mission: to play a leading role in mobilising the finance needed to limit global warming to 1.5° Celsius. The EIB is the world's largest multilateral provider of climate finance. The Climate Strategy guides our actions within and outside the European Union to increase EIB finance for projects that have a positive climate impact.

The first EIB Adaptation Plan, published in October 2021, builds on the EIB Group's approach to climate adaptation and resilience outlined in the Climate Bank Roadmap. It also sets an extra target to raise the share of EIB climate action for adaptation to 15% of its overall climate finance by 2025. Additionally, the plan aims to increase the Bank's support for vulnerable countries and communities, and to provide more access to advisory services and technical assistance to build resilience in both the public and the private sector. Through this initiative, the EIB endorses the EU Adaptation Strategy for smarter, faster and more systemic adaptation within and outside the European Union. The EIB Climate Strategy is the cornerstone of the Bank's approach to climate considerations.

The Climate Strategy is structured around three strategic action areas that serve as guidelines for the Bank's future climate action: (1) reinforcing the impact of EIB climate financing, (2) increasing resilience to climate change, and (3) further integrating climate change considerations across all the Bank's standards, methods and processes.

The EIB Group Climate Bank Roadmap 2021-2025 builds on the EIB's revised Climate Strategy and outlines the Group's response to the worsening climate situation, which calls for an acceleration and scaleup of its climate and environment-related actions. It is the operational framework setting out how the EIB Group will support the objectives of the European Green Deal, and lays out clear goals for the transition to a low-carbon, climate-resilient and environmentally sustainable economy by:

- raising the EIB's annual financing for climate action and environmental sustainability to more than 50% of our financing by 2025;
- supporting at least €1 trillion of climate action and environmental sustainability investments over the critical decade 2021-2030;
- aligning all our financing activities with the goals and principles of the Paris Agreement.

The Green Deal is the European Commission's framework for making the European Union's economy sustainable by turning climate and environmental challenges into opportunities, and making the transition just and inclusive for all. The EIB Group Climate Bank Roadmap internalises these commitments by focusing on four key areas.

1. Accelerating the transition through green finance

The Climate Bank Roadmap actively supports the focus areas outlined in the European Green Deal, from building greater resilience to climate change through to protecting nature, within and beyond the European Union. In product innovation, the EIB Group is well placed to support the entire spectrum of technological innovation, from seed capital for very early-stage development to senior debt for mature technologies.

2. Ensuring a just transition for all

The EIB Group's approach to the just transition established in the Climate Bank Roadmap aims to ensure that no people or places are left behind in the transition to low-carbon and climate-resilient societies. Supporting cohesion was one of the founding principles of the EIB when it was created in 1958, and continues to be a core priority. The EU Just Transition Mechanism is the European Union's response to the concerns of those countries that currently rely on carbon-intensive sectors or where local economies may become less viable due to the effects of climate change. The EIB Group will play a central role within the mechanism, lending support in varying degrees for each of its three main pillars: the Just Transition Fund, the InvestEU programme and a public sector loan facility.

3. Supporting Paris-aligned operations

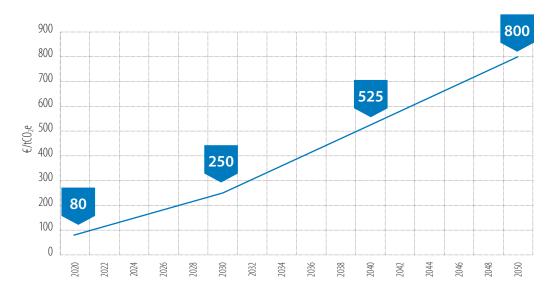

The Climate Bank Roadmap lays out the alignment framework for putting our commitments into practice and clarifies the ongoing and future work needed. Financing activities have to be aligned with both temperature and adaptation goals, and must be consistent with low-carbon pathways and climate-resilient development.

To align with low-carbon pathways, we adopted sector-specific criteria for key industries such as energy (where we will apply the new Energy Lending Policy), aviation, road infrastructure, road vehicles, and agriculture and forestry.

Since 2021, our new projects have been aligned with the Paris Agreement and we no longer support projects not aligned with its goals, such as airport capacity expansions and new conventional, energy-intensive industrial plants.

To align with the Paris Agreement, we agreed to increase the EIB shadow cost of carbon over time. As shown in the graph below, the cost will rise to €250 by 2030, and to €800 by 2050. The shadow cost of carbon is a key technical parameter we use to perform the economic appraisal of investment projects. As indicated above, as part of the sustainability due diligence process, the EIB makes a separate economic appraisal of investment projects to assess the costs and benefits to society as a whole. This takes into account the resources used by the project (human, technological or natural), in some cases using shadow prices, including for greenhouse gas emissions, and gauges the value generated by the project to determine whether there are overall gains for society.

EIB shadow cost of carbon (in € per tCO₂e)

The graph shows the EIB shadow cost of carbon, as included in the roadmap. It is based on an assumed carbon tax levied to implement the Paris Agreement, and it helps to assess whether EIB financing is on track with this goal. This will be reviewed on an annual basis and the cost will be adjusted accordingly.

The second dimension of alignment concerns climate resilience. To manage physical climate risk and ensure consistency with resilient development at project level, the EIB uses a climate risk assessment system for direct lending. This system helps the Bank and its clients to understand how climate change may affect their projects and identify adaptation measures. As part of the assessment, an initial screening based on the sub-sector and country of operation is performed for all new operations. In the case of high or medium risk, a second, more detailed screening takes place to identify any project vulnerabilities. During the appraisal process, a more comprehensive climate risk and vulnerability assessment is carried out to identify measures that can be integrated into the project to reduce climate vulnerabilities. At the end, we estimate the residual physical climate risk for each operation.

At the counterparty level, our climate risk screening tool assesses climate risk factors, as well as counterparty exposure to these factors, and quantifies the impact that each risk factor will have on the counterparty. A model has been developed for each of the Bank's main credit segments (corporates, financial institutions, public sector entities, sub-sovereign public authorities, project finance and equity). The methodology determines the physical risk, transition risk and mitigation/adaptation capacity of each counterparty and provides a climate score from one (low risk) to five (high risk).

Under the Paris Alignment of Counterparties (PATH) framework published in 2021, the EIB Group took another step to enhance its due diligence process for counterparties. The PATH framework applies to certain corporates and financial institutions globally. The main goal of the framework is to engage with and support counterparties that are aligned, or are willing to align, with the Paris Agreement, while ensuring that the Group does not finance

organisations engaged in incompatible activities such as coal mining and high-carbon oil production. The need to align is most acute for companies in high-emitting sectors and those operating in areas that are highly vulnerable to climate change. This framework is designed to support such counterparties in making the transition to a low-carbon and climate-resilient future.

4. Building strategic coherence and accountability

Scope 1 greenhouse gas emissions (in Mt CO₂e/year) *

To deliver on the three workstreams above, the EIB Group needs to integrate them into a coherent policy approach that supports sustainable finance. This approach must also ensure robust and timely delivery of all Paris alignment activities, and provide opportunities for monitoring, learning and improvement. The EIB Group approach is based on three cross-cutting aspects:

- 1. Establishing new policies that set out how climate and environment-related activities fit within the wider context of sustainable finance and overall environmental and social sustainability, including alignment with the EU taxonomy.
- 2. Providing transparency, accountability and quality assurance. To further factor climate change and environmental and social considerations into our financing activities, we are enhancing and developing additional risk management tools to assess physical, transition and systemic risks at the project, portfolio and counterparty level.
- 3. Securing institutional support for the EIB Group's activities by building strategic partnerships with selected key stakeholders, communicating on progress and challenges, and training employees for the tasks ahead.

Additional detailed information can be found in the EIB Group Task Force on Climate-related Financial Disclosures (TCFD) Report 2023, which discloses climate-related information to end investors in the areas of governance, strategy, risk management, and metrics and targets, and in the EIB Group 2023 Climate Bank Roadmap Progress Report, which outlines the progress made in implementing the EIB Group Climate Bank Roadmap.

GREENHOU	SE GAS EMISSIONS			
METRIC:	EM-C0110a.1			
	Direct (scope 1)¹ greenhouse gas emission internal operations ☑	ns in metric tonnes of CO₂ equiva	lent per year resulting f	rom EIB Group
		2023	2022	2021

^{*} Due to the restatement of 2022 emissions to reflect methodological improvements and the expansion of reporting boundaries, the 2021 figure is not exactly comparable to 2022 and 2023.

0.000022

0.000036

For more information, emissions calculations (including scope 2 and 3), and details on compensation of scope 1, 2 and 3 emissions, please see the EIB Group Carbon Footprint Report 2023.

0.000041

¹ Emissions from sources that are owned or controlled by the reporting entity (i.e. any owned or controlled activities that release emissions directly into the atmosphere).

E

Carbon footprint of EIB financing ✓

	2023	2022	2021
Number of projects	80	91	86
Total EIB amount signed (in € billion)	24	16	15.6
Absolute emissions (in Mt CO ₂ e/year) ²	1.2	1.6	2.3
Carbon sequestration from forestry (in Mt CO ₂ e/year) ²	0	0.03	0
Relative emissions (in Mt CO ₂ e/year) ²	-5.2	-4.6	-2.3

The table reports projects with significant estimated greenhouse gas emissions, i.e. emissions above one or both of the following two thresholds:

- Absolute emissions (actual emissions from the project) > 20~000~(> 100~000~until~2018) tonnes of CO_2e per year for a standard year of the project's operations.
- Relative emissions (estimated increases or reductions in emissions compared to the expected alternative) > 20 000 tonnes of CO₂e per year. ✓

Analysis of our carbon footprint suggests that these two thresholds cover approximately 95% of emissions from the EIB's investment projects.

For more information, please see the EIB Group Sustainability Report 2023.

METRIC:

EM-CO-110a.2

Management of scope 1 emissions

A key priority for the EIB Group is environmental commitment, which covers all of its activities. At its own office facilities, the Group takes steps to reduce its impact on the environment.

European Union's Eco-Management and Audit Scheme certification³

Since 2019, the environmental management system of the EIB Group has been successfully registered and certified according to the European Union's Eco-Management and Audit Scheme (EMAS) Regulation for its main head office in Luxembourg. The implementation of an environmental management system in accordance with EMAS has enabled the EIB Group to monitor, manage and report on its internal environmental performance in a comprehensive and externally verified manner.

Within the environmental management system, a permanent EMAS governance structure has been implemented, with the Secretary General of the EIB chairing the EMAS Steering Committee to provide oversight of the EMAS registration and of the environmental performance of the Group, and represent "top management" as defined in the EMAS Regulation. The EIB Group passed its surveillance audit in 2023 and the renewal of its EMAS certification is currently scheduled for October 2024.

For more information, please see the Environmental Statement 2023 Update.

² Emissions and carbon sequestration are prorated to the EIB lending volume prior to aggregation. Total project emissions (absolute) and savings (relative) would be significantly larger.

 $^{3 \}quad \text{European Commission--Eco-Management Audit Scheme (EMAS): } https://ec.europa.eu/environment/emas/index_en.htm. \\$

Corporate carbon footprint

Since 2007, the EIB Group has been measuring and reporting on its carbon emissions resulting from internal activities as part of its corporate responsibility efforts every year. The EIB Group uses the operational control approach to calculate its carbon footprint for the purpose of reporting greenhouse gas emissions. Reporting includes the Group's headquarters in Luxembourg, where it operates seven office facilities. External offices are currently not included in the scope of the greenhouse gas inventory.

To continually improve its environmental management system and performance (a requirement of the EMAS Regulation), the EIB Group regularly reviews its emissions reporting boundary, focusing particularly on scope 3 emissions as defined by the Greenhouse Gas Protocol and in view of the upcoming environmental reporting requirements under the Corporate Sustainability Reporting Directive.

Over the years, the EIB Group has gradually expanded its reporting scope to cover, for example, emissions associated with external data centres (since 2014), emissions derived from business travel during hotel stays and from courier shipments (since 2019), homeworking emissions (since 2020) and, more recently, fugitive emissions (scope 1) as well as upstream emissions from energy-related activities (since 2024).

For more information, please see the EIB Group Carbon Footprint Report 2023.

Greenhouse gas emission reduction targets

The EIB Group applies the same environmental requirements to the management of its own facilities as it does to its financing activities. As part of the institutional alignment with the principles and objectives of the Climate Bank Roadmap, the EIB Group has set carbon emission reduction targets for EIB Group internal operations in line with the 1.5° C goal of the Paris Agreement. This means a 12.4% absolute reduction target in terms of annual greenhouse gas emissions in 2025 as compared to the base year emissions in 2018.

Corporate Climate programme

The Corporate Climate programme 2021-2025 is rolling out several initiatives to tackle both corporate greenhouse gas emissions and environmental footprint in the way we work, travel and do business:

- The way we work includes further digitalisation of internal processes, reducing printing and printers, efficient use of office space, and minimising waste and single-use plastics, among other measures.
- The way we travel includes, among others, raising awareness of low-carbon travel arrangements for business and commuting, improving video conferencing and teleworking tools to reduce the need for travel, and accelerating the shift to a hybrid or electric fleet.
- The way we do business means involving our business partners in our goal to transition to a low-carbon economy, and including sustainability and circular economy principles in our tenders and new contracts.

Reduction initiatives in 2023

In 2023, the EIB Group continued to implement efficiency initiatives in its internal operations to improve its environmental performance.

In its buildings, the EIB Group continued to implement energy efficiency and conservation measures, such as:

- · managing heating, ventilation and air-conditioning operating hours, adjusting comfort conditions in offices and IT rooms, and adjusting lighting;
- · upgrading our building management and energy software and installing new energy sub-meters in order to better monitor and manage energy consumption.

The various energy-saving measures and initiatives implemented led to electricity and heating savings of 5 200 MWh in 2023 when compared with the average electricity and heating consumption over 2018 to 2022 and adjusted for differences in weather conditions. This represents 15.1% of the EIB Group's average equivalent gas consumption in 2018-2022.

We are also continuously improving the environmental performance of our company car fleet and implementing sustainability and circular requirements for the Bank's main procurement of goods and services with a high environmental impact. We have also engaged with our supply chain on sustainability objectives through the implementation of a sustainable supply chain plan.

Finally, we are continuing to raise awareness among staff on sustainable behaviour at work, either through gamification or through pragmatic training sessions on the sustainable use of buildings and on active mobility habits.

For more information, please see the Environmental Statement 2023 Update.

Dedication to climate action

The EIB Climate Strategy and the EIB Group Climate Bank Roadmap operationalise our climate bank commitments in support of the European Green Deal and the 2030 climate goals. The objectives laid out in the roadmap guide the financing side of our energy and emissions approach.

For more information, please see the Climate Bank Roadmap, the 2023 Climate Bank Roadmap progress report, and the Mid-term review of the EIB Group Climate Bank Roadmap.

Carbon footprint of EIB financing

EIB climate-related standards in the Environmental and Social Standards require EIB financing to be aligned with EU climate policies, which should be considered at all stages of the project cycle.

As indicated above, in the economic appraisal of investment projects, the EIB assesses the costs and benefits to society as a whole. This takes into account the resources used by the project (human, technological or natural), in some cases using shadow prices, including for greenhouse gas emissions, and gauges the value generated by the project to determine whether there are overall gains for society.

The Bank uses well-established techniques to appraise a project's economic value, such as cost-benefit analysis, cost-effectiveness analysis and multi-criteria analysis. Cost-benefit analysis is the preferred method where sufficient data are available. This is generally the case in sectors such as agro-industry, energy, manufacturing, telecommunications, tourism, transport and water/wastewater. In other areas, including education, health, or urban and regional development, the benefit of a project may not be easily measured monetarily.

Project promoters must ensure that all projects comply with appropriate national and, where applicable, EU legal requirements, including multilateral agreements, related to climate change policy.

The EIB calculates and reports the carbon footprint of the projects it finances to provide transparency on the greenhouse gas emissions footprint of its financing activities. \square

For more information, please see the EIB Project Carbon Footprint Methodologies.

To the management of the **EIB Group** 98-100, Boulevard Konrad Adenauer L-2950 Luxembourg

Independent limited assurance report

We were engaged by the management of the European Investment Bank Group (the European Investment Bank "EIB" and its subsidiary, the European Investment Fund "EIF" together referred to as the "Group") to report in the form of an independent limited assurance conclusion that, based on the work performed and evidence obtained, nothing has come to our attention that causes us to believe that the statements and indicators marked in italics and with a tick ☑ that are disclosed in the EIB Group Sustainability Report, prepared in accordance with the Global Reporting Initiative (GRI) standards, and the EIB sustainability disclosures, prepared in accordance with the Sustainability Accounting Standards Board (SASB) framework (the "Reports"), are not prepared in all material respects, in accordance with the EIB internal framework for the year ended 31 December 2023.

Responsibilities of the EIB Group management

The management of the EIB Group is responsible for the preparation and presentation of the EIB Group Sustainability Report and the information and assertions contained within it, in accordance with the GRI standards applicable in 2023 at the EIB Group; for determining the EIB Group's objectives in respect of sustainable development performance and reporting, including the identification of stakeholders and material issues; and for establishing and maintaining appropriate performance management and internal control systems from which the reported performance information is derived.

Similarly, the management of the EIB Group is responsible for the preparation and presentation of the EIB Sustainability Disclosures and the information and assertions contained within it, in accordance with the Sustainability Accounting Standards Board ("SASB") framework applicable in 2023 at the EIB Group.

This responsibility includes designing, implementing and maintaining internal controls relevant to the preparation of the Reports.

The management of the EIB Group is responsible for preventing and detecting fraud and for identifying and ensuring that the EIB Group complies with laws and regulations applicable to its activities.

The management of the EIB Group is responsible for ensuring that staff involved in the preparation and presentation of the Reports are properly trained, information systems are properly updated and that any changes in reporting encompass all significant business units.

Our responsibilities

Our responsibility is to examine the Reports and to report thereon in the form of an independent limited assurance conclusion based on the evidence obtained. We conducted our engagement in accordance with the International Standard on Assurance Engagements (ISAE) 3000, Assurance Engagements other than Audits or Reviews of Historical Financial Information, issued by the International Auditing and Assurance Standards Boards as adopted for Luxembourg by the Institut des Réviseurs d'Entreprises (IRE).

That standard requires that we plan and perform our procedures to obtain limited assurance about whether the statements and indicators marked in italics and with a tick ☑ that are disclosed in the EIB Group Sustainability Report, prepared in accordance with the GRI standards, and the EIB sustainability disclosures, prepared in accordance with the SASB framework (the "Reports"), are prepared in all material respects in accordance with the EIB internal framework for the year ended 31 December 2023 and are free from material misstatements, as the basis for our limited assurance conclusion.

Our firm applies the International Standard on Quality Management 1, "Quality Management for Firms that Perform Audits or Reviews of Financial Statements, or Other Assurance and Related Services Engagements" ("ISQM 1"), as adopted for Luxembourg by the Commission de Surveillance du Secteur Financier (CSSF) and accordingly, maintains a comprehensive system of quality control, including the design, implementation and operation of a system of quality management of audits or reviews of financial statements, or other assurance and related services engagements.

We have complied with the independence and other ethical requirements of the International Ethics Standards Board for Accountants' International Code of Ethics for Professional Accountants (including International Independence Standards) (IESBA Code) as adopted for Luxembourg by the CSSF, which is founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality, and professional behaviour.

Summary of work performed

A limited assurance engagement on the Reports consists of making inquiries, primarily of persons responsible for the preparation of information presented in the Reports, and applying analytical and other evidence gathering procedures, as appropriate, with relation to the statements and indicators marked in italics and with a tick \square . These procedures included:

- inquiries of management to gain an understanding of the Group's processes for determining the material issues for the Group's stakeholder groups;
- interviews with relevant staff at corporate and business unit level responsible for providing the information in the Reports;
- a media analysis and an internet search for references to the Group during the reporting period;
- inquiries about the design and implementation of the systems and methods used to collect and process the information reported, including the aggregation of data into information as presented in the Reports;
- comparing the indicators and statements in the Reports marked in italics and with a tick ☑ to corresponding information in the relevant underlying sources, when applicable;
- verifying that the indicators and statements in the Reports marked in italics and with a tick
 were correctly derived from the Group's 2023 audited financial statements, when applicable.

The procedures selected depend on our understanding of the statements and indicators marked in italics and with a tick \square within the Reports and other engagement circumstances, and our consideration of areas where material misstatements are likely to arise.

Our engagement also included: assessing the appropriateness of the statements and indicators marked in italics and with a tick \square within the Reports and the suitability of the criteria used by the EIB Group in preparing the statements and indicators marked in italics and with a tick \square within the Reports in the circumstances of the engagement.

The procedures performed in a limited assurance engagement vary in nature and timing from, and are less in extent than for, a reasonable assurance engagement. Consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.

Inherent limitations

Because of the inherent limitations of any internal control structure, it is possible that errors or irregularities may occur and may not be detected. Our limited assurance engagement is not designed to detect all weaknesses and errors in the Reports as the evidence has been obtained on a sample basis. Accordingly, we do not express an audit or a reasonable assurance conclusion on the Reports as a whole or on the indicators and statements in the Reports marked in italics and with a tick \square .

Further, the internal control structure within which the control procedures which are the subject of our engagement are designed to operate, has not been subject to any limited assurance procedures and no opinion is expressed as to its effectiveness.

Any projection of the suitability of design and implementation of controls and their meeting the requirements of the Reports to future periods is subject to the risk that the procedures may become inadequate because of changes in conditions, or that the degree of compliance with policies or procedures may deteriorate.

The limited assurance opinion expressed in this report has been formed on the above basis.

Conclusion

Our conclusion has been formed on the basis of, and is subject to, the matters outlined in this

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our conclusion.

Based on the procedures performed and evidence obtained, nothing has come to our attention that causes us to believe that the indicators and statements in the Reports marked in italics and with a tick \(\mathbb{I} \) are not prepared, in all material respects, in accordance with the internal reporting criteria applicable in 2023 at the EIB Group.

Restriction of Use of Our Report

Our report is solely for the purpose set forth in this report and is not to be used for any other purpose.

It shall not be translated, summarised, disclosed, published or transmitted electronically, in a whole or in part, for any other purposes, without our prior consent.

We will agree with you the basis and timing of communications.
