  - SDG 10: Reduced inequalities (non-EU) 20
The European Investment Bank's contribution to the Sustainable Development Goals
The UN Sustainable Development Goals in EU policy

The United Nations’ 17 Sustainable Development Goals (SDGs) provide a framework for measuring international efforts to end world poverty, protect the planet and ensure that everyone can enjoy peace and prosperity. The goals are explicitly taken into account in the formulation of all European Union policies.

The European Investment Bank (EIB) has been tracking and reporting how its projects contribute towards the SDGs since 2016. Since 2020, the Bank has expanded its reporting to include more information and to demonstrate the full impact of its investments throughout the world. As the EU climate bank, climate action naturally lies at the heart of the EIB’s mission but the Bank’s activities also have an impact on many of the Sustainable Development Goals.

Quantifying the EIB’s contribution towards the SDGs

The EIB’s methodology for SDG reporting, in financial terms and in terms of project outputs and outcomes, is comparable to methodologies adopted by other multilateral development banks.

All the projects that the EIB supports are designed to have a positive socioeconomic impact as well as sound financial returns. The impact of the Bank’s work is measured by gathering a detailed set of output and outcome data for all its projects. This ensures that the tangible benefits of the Bank’s activities are calculated not only in the context of each project, but also at the sectoral, national and international level.

The EIB’s mapping methodology defines the relationship between the EIB’s project-level indicators and the SDGs. All indicators are mapped to the appropriate SDGs independently of project context, and each indicator may be mapped to up to three different SDGs. Each project thus contributes to all of the SDGs to which its data has been mapped. This approach takes into account the full range of interactions and interlinkages among the SDGs and minimises the number of arbitrary decisions required in the mapping process.
How project results are mapped to SDGs

Each EIB project is mapped to up to three SDGs using a range of data elements, which include the project’s location, sector, anticipated results, eligibility and the type of financing product used.

The process is fully automated and as streamlined and standardised as possible. EIB experts review the results and may modify a mapping to take account of context-specific factors, when necessary.
A selection of indicators from projects signed in 2020 illustrates how their impact contributes to particular SDGs.

The European Investment Bank’s contribution towards the SDGs in 2020

2020 is the first year for which full SDG mappings are available for all projects signed by the EIB. The following charts give a clear visual summary of the EIB’s impact through the lens of its contributions to the SDGs in all the regions in which the Bank is active inside and outside the European Union.

Sector-specific SDGs inside and outside the European Union

EIB-backed projects bring considerable support to goals focusing on sectors in which the Bank has a long-established track record.

1. The EIB distinguishes between sector-specific and cross-sector SDGs to highlight its contribution to the sectors in which it is traditionally active and the broader economic impact of its lending.
2. All financial contributions are based solely on EIB own resources and co-financed activities. Given that a project may be mapped to up to three SDGs, the EIB’s total annual SDG contribution necessarily exceeds its total lending for the year in question.
Cross-sector SDGs inside and outside the European Union

Support for the cross-sector goals highlights the Bank’s impact on SDGs representing a complex interaction of less tangible factors, both natural and human-induced.
2020 financial contributions to SDGs inside the European Union

The European Investment Bank's contribution to the Sustainable Development Goals
Climate awareness bonds and sustainability awareness bonds: Reliable and sustainable investment for SDGs

The Sustainable Development Goals have been an integral part of the European Union’s policy framework since 2016. A Communication from the European Commission explicitly links the SDGs to the European Union’s policy framework to ensure that all actions and policy initiatives, both within the European Union and globally, take the SDGs on board from the outset. This applies directly to the regulatory framework that the European Union has established to facilitate sustainable investment.

To achieve the SDGs, capital flows need to be channelled efficiently towards investments in sustainable economic activities. The EU Taxonomy Regulation establishes criteria for determining whether an economic activity qualifies as sustainable for this purpose. The EIB is championing the application of this regulation to lending and funding.

The EIB issues two sustainability funding instruments: climate awareness bonds (CABs) and sustainability awareness bonds (SABs). The funds raised by climate awareness bonds are allocated to the EIB’s lending activities for projects that contribute substantially to climate change mitigation. Sustainability awareness bonds complement CABs and are used for other areas of environmental and social sustainability (see table below).

The EIB was the first issuer to align the documentation of its sustainability funding instruments with the EU Taxonomy Regulation. This has enabled it to progressively expand the use of such bonds and the volume of projects it allocates in this way. It also allows investors to monitor consistently how the funds raised are being used through audited allocation and impact reports. This provides a reliable sustainable investment opportunity at the service of the Sustainable Development Goals.
The European Investment Bank’s (EIB) contribution to the Sustainable Development Goals (SDGs) has been enhanced through the integration of climate and sustainability awareness bonds. This initiative aligns with the EIB’s objectives and activities, as framed by the EU Taxonomy Regulation.

### CAB/SAB Sustainability Objectives and Activities – Status as of End-2021

<table>
<thead>
<tr>
<th><strong>Climate Awareness Bonds</strong></th>
<th><strong>Sustainability Awareness Bonds</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Environmental</strong></td>
<td><strong>Environmental (other than climate change mitigation)</strong></td>
</tr>
<tr>
<td>- Climate change mitigation (2007)</td>
<td>- Sustainable use and protection of water and marine resources (2018)</td>
</tr>
<tr>
<td>- Research, development and deployment of innovative low-carbon technologies (June 2020)</td>
<td>- Pollution prevention and control (2018)</td>
</tr>
<tr>
<td>- Electric rail infrastructure and rolling stock, and electric buses (June 2020)</td>
<td>- Protection and restoration of biodiversity and ecosystems (2021)</td>
</tr>
<tr>
<td>- Water projects (2018)</td>
<td>- Sustainable forest management (2021)</td>
</tr>
</tbody>
</table>

The extension of eligible objectives and activities in the context of the EU Taxonomy Regulation has enabled the EIB to substantially increase its issuance of both climate awareness and sustainability awareness bonds.

### CAB/SAB Issuance and Share in EIB’s Total Funding Programme

- **Total CABs/SABs issued:** €49.87bn
- **Total CABs/SABs outstanding:** €41.52bn
- **Number of CAB/SAB currencies:** 22

The extension of CAB/SAB eligibility in 2020 includes:

- **CAB Eligibility**: 2007-2020: Renewable energy and energy efficiency projects; 2020: Extended to: (a) electric rail infrastructure and vehicles and other electric public land transport vehicles, (b) research, development and deployment of innovative low-carbon technologies.

Data as of 1 December 2021
