Environmental and Social Completion Sheet (ESCS)

Overview

Project Name:	Halsostaden Hospital - Skåne
Project Number:	20130608
Country:	Sweden
Project Description:	The consolidation and reorganisation of the hospital in Ängelholm enabling a close cooperation of hospital, primary and elderly care.

Summary of Environmental and Social Assessment at Completion

EIB notes the following key Environmental and Social outcomes at Project Completion.

The project covers the rehabilitation and extension work for an existing hospital. With the completion of the works, all services have consolidated on a single site in either new or rehabilitated facilities. An integral part of the project was the provision of facilities which suit better to the needs of elective and long-term care.

Through the consolidation of the services in new buildings, the overall space requirements have been reduced by 15 000 m² and allowed the promoter to free about half of the existing site for a new urban use. A further positive aspect is the provision of a new access solely for pedestrians and cyclists what encourages the use of alternative traffic.

Overall the replacement or modernisation of the outdated buildings will improve hygiene and safety conditions. A significant reduction in energy is expected since the new and rehabilitated buildings have been designed according to high energy standards.

No significant environment or social issues were noted.

Summary opinion of Environmental and Social aspects at completion:

EIB is of the opinion based on reports from the promoter, site visits by the EIB team during Construction that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
