## Environmental and Social Completion Sheet (ESCS)

### Overview

Project Name:	ASSA ABLOY DOOR SOLUTIONS RDI II
Project Number:	2015-0376
Country:	Sweden, Germany, United Kingdom
Project Description:	The project concerned investments in research, development and innovation activities related to door opening and entrance systems, automation, identification and control systems, aiming to improve security, safety functionality and convenience.

### Summary of Environmental and Social Assessment at Completion

#### **EIB notes the following key Environmental and Social outcomes at Project Completion.**

The project concerned the financing of research, development and innovation (RDI) activities not subject to EIA Directive 2011/92/EU. All RDI activities were carried out in existing facilities without changing their already authorised scope.

The rising demand for sustainable solutions is an important driver for product development since entrance solutions play a key role in the improvement of energy efficiency of buildings. The applications that the company has developed are many, ranging from intelligent building entrance systems to integration of light and other energy management solutions, as well as development of “energy neutral” electronic doors. Energy efficiency is embedded in the development process, and it is estimated that more than 10% of the R&D spent concerned developments that support energy efficiency.

No significant environment or social issues were noted.

#### **Summary opinion of Environmental and Social aspects at completion:**

EIB is of the opinion based on reports from the promoter, during Construction that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
