Environmental and Social Data Sheet

Overview

Project Name:	LEONARDO INNOVATION PROGRAMME
Project Number:	2020-0620
Country:	ITALY, GERMANY
Project Description:	The project comprises a selection of the promoter's Research, Development and Innovation (RDI) activities focused on the helicopters, space, defence electronics and security business areas, as well as advanced research activities performed within the promoter's technology hubs dedicated to R&D on leading edge and breakthrough technologies. The project covers the period between 2022 and 2026.
EIA required:	No
Project included in Carbon Footprint Exercise ¹ :	No

Environmental and Social Assessment

Environmental Assessment

The research and development activities included in the financed project are not listed in any of the annexes of the EIA Directive 2011/92/EU amended by the Directive 2014/52/EU. The project is therefore not subject to the EIA Directive. The proposed project comprises a selection of the promoter's RDI activities in line with the EIB Climate Bank Roadmap (CBR).

The promoter has a long term vision that considers the impact of its activities across the entire value chain in accordance with the Sustainable Development Goals of the UN 2030 Agenda (SDGs) and the guidelines of the European Green Deal. The Promoter's Sustainability Plan translates its vision into actions, projects and practices, measurable in the short and long term, oriented towards the achievement of the SDGs. The project's activities are in line with the promoter's Sustainability Plan and therefore contribute to the same SDGs.

Other Environmental and Social Aspects

Environment and occupational health and safety issues are embedded in the promoter's management system; all the major promoter's locations are certified ISO 14001 and OHSAS18001.

Conclusions and Recommendations

In the light of the above, the project is acceptable for EIB financing in E&S terms.

¹ Only projects that meet the scope of the Carbon Footprint Exercise, as defined in the EIB Carbon Footprint Methodologies, are included, provided estimated emissions exceed the methodology thresholds: 20,000 tonnes CO₂e/year absolute (gross) or 20,000 tonnes CO₂e/year relative (net) – both increases and savings.
