

Environmental and Social Data Sheet

Overview

Project Name:	A2A E-MOVING NETWORK INFRASTRUCTURE
Project Number:	2020-0508
Country:	ITALY
Project Description:	The project concerns the deployment of an Electric Vehicle Charging (EVC) network in Northern Italy and involves the installation of 1,303 charging stations. The charging infrastructure will consist of 326 Fast Chargers (i.e. 50kW) and 977 Quick Chargers (i.e. 22kW).
EIA required:	no
Project included in Carbon Footprint Exercise ¹ :	yes

(details for projects included are provided in section: "EIB Carbon Footprint Exercise")

Environmental and Social Assessment

Environmental Assessment

EVC infrastructure is not subject to environmental impact assessment under the EIA Directive. However, the construction of greenfield parking locations where the EVC infrastructure is installed and/or the connections to the grid may be screened under Annex II of the said Directive. In such cases, the Bank requires to be informed of the screening decisions issued by the competent authorities.

EIB Carbon Footprint Exercise

It is estimated that the Project will generate 39 kt of CO₂ emission (absolute) per year, on average over the project assessment period. This is an estimation based on the initial expected consumption figures as reported by the Promoter, and it takes into account the electricity consumption using the grid factor of the respective country. The Promoter purchases renewable electricity. If this renewable electricity is accounted as zero, there will be no upstream absolute CO₂ emissions.

Moreover, the project is expected to result in indirect CO₂ equivalent (CO₂e) emission savings of approximately 34 ktCO₂e per year, on average, over the project assessment period. The emission savings result from the replacement of conventional cars operating on fossil fuels with electric cars powered by less carbon intensive electricity. For the annual accounting purposes of the EIB Carbon Footprint, the project emissions will be prorated according to the EIB lending amount signed in that year, as a proportion of project cost.

¹ Only projects that meet the scope of the Carbon Footprint Exercise, as defined in the EIB Carbon Footprint Methodologies, are included, provided estimated emissions exceed the methodology thresholds: 20,000 tonnes CO₂e/year absolute (gross) or 20,000 tonnes CO₂e/year relative (net) – both increases and savings.

Luxembourg, 25 November 2020

Conclusions and Recommendations

The Bank reviewed the environmental and social capacity of the Promoter including its organisation, processes and procedures, and deemed them to be good.

Undertakings:

- The Promoter shall ensure that adequate environmental, social, health and safety management plans, defined according to the legal requirements and related documents, are implemented and monitored during the construction of the project, and will notify the Bank of any unexpected environmental impacts or incidents during the works.
- The Promoter shall ensure that the electricity distributed through the EVC infrastructure is from renewable sources.
- For those electric vehicle charging station installations that may be subject to screening by the Competent Authorities under the EIA Directive, the Promoter shall provide the Bank with evidence of such screening decisions.

Based on the information available, the project is expected to be acceptable for Bank financing from an environmental and social perspective.
