Environmental and Social Completion Sheet (ESCS)

Overview

Project Name:	ALK-ABELLO ANTI-ALLERGY TREATMENT RDI
Project Number:	2016-0046
Country:	Denmark
Project Description:	The project covers the promoter's financing to support research and development activities into allergic diseases

Summary of Environmental and Social Assessment at Completion

EIB notes the following key Environmental and Social outcomes at Project Completion.

No significant environment or social issues were noted. The project concerned investments in research and development that was carried out in existing facilities mainly at the promoter central R&D side in Horsholm, Denmark, without changing their already authorised scope. Further, according to the promoter's 2019 annual report, the promoter initiated several projects to explore ways to reduce resource consumption, resulting in both a reduction in emissions and financial benefits. For instance, in one of these projects, switching from aeroplanes to ships as a mode of transportation for tablets reduced the overall environment impact while reducing cost. The promoter also continues to look for ways to reduce the use of plastics as packaging material.

Summary opinion of Environmental and Social aspects at completion:

EIB is of the opinion based on reports from the promoter, and/or inputs provided by Lenders' Supervisors and others, where applicable) during Construction that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
