Environmental and Social Completion Sheet (ESCS)

Overview

Project Name:	AMPHIA HOSPITA
Project Number:	2016-0654
Country:	The Netherlands
Project Description:	The project supports the development plan of the Amphia hospital, a regional hospital located in Breda and Oosterhout originated from the merger of three existing facilities in 2001. The project aims at regrouping all the core functions in one new facility built ad-hoc and locate all the other services in existing buildings to be renovated and adapted to the new clinical and care needs.

Summary of Environmental and Social Assessment at Completion

EIB notes the following key Environmental and Social outcomes at Project Completion:

The Promoter is Amphia, a regional hospital (619 beds) located in the Breda area in the south-eastern part of the Netherlands serving approximately 400 000 inhabitants living in and around Breda. The Project supported the necessary investments for the consolidation of all acute hospital care on - site (the Molengracht site in Breda) as well as investments in modern medical equipment and an improved IT systems (electronic patients files) enabling patients to access their personal medical data. In respect to the actual construction works, the relevant construction permits were issued without requesting an EIA through the Competent Authority.

Through the consolidation of the key medical services in a new building, the overall space requirements of the hospital group have been reduced and the former site in Langendijk has been freed for a new urban use. The replacement and modernisation of the outdated buildings have improved hygiene and safety conditions. A significant energy reduction is expected since the new and rehabilitated buildings have been designed according to the current high energy standards.

The Promoter has been awarded a bronze certificate according to the Dutch standard "Milieuthermometer Zorginstellingen en Ziekenhuizen (Environmental Thermometer for Healthcare Institutions and Hospitals) confirming that the Promoter has an integrated system in place to measure – and improve - the environmental performance of his activities.

Summary opinion of Environmental and Social aspects at completion:

EIB is of the opinion based on reports from the Promoter that the Project has been implemented (in line) with EIB Environmental and Social Standards, applicable at the time of appraisal.
