Environmental and Social Completion Sheet (ESCS)

Overview

Project Name: *ACEA EFFICIENZA RETE III*
 Project Number: *2015-0220*
 Country: *Italy*
 Project Description: *Investments to reinforce and extend the electricity distribution network in the Rome metropolitan area during 2016-2019*

Summary of Environmental and Social Assessment at Completion

EIB notes the following key Environmental and Social outcomes at Project Completion.

The project is a multi-component investment programme comprising the implementation of a large number of schemes in electricity distribution. The programme is located in the Rome metropolitan area.

At the time of appraisal, some programme schemes fell under Annex II of the EIA Directive (2011/92/EU), which required the competent authority to determine the need for a full EIA. Four schemes were subject to a full EIA.

For three of them (lines Roma Nord – Bufalotta, Flaminia/O – Cassia and Roma Nord – San Basilio) a full EIA had been conducted at appraisal and the EIA decisions were granted by the competent authority. The remaining scheme (line Roma Sud – Castel Romano) was at completion excluded from the project technical scope due to deviations/delays in the permitting process.

The environmental impact analysis carried out along with the conclusions of the EIA consents indicate that, subject to the implementation of specified mitigation measures and conditions, the schemes would neither have significant adverse effects on the environment nor adversely affect the integrity of any European site in view of the site's conservation objectives.

No significant environmental or social issues were reported during the implementation.

Summary opinion of Environmental and Social aspects at completion:

EIB is of the opinion based on reports from the promoter during Construction that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
