Country:	Greece
Project Description:	OneDealer International develops an all-in-one automotive solution for dealers of all sizes (importers, dealerships, OEMs and car repair shops) to manage their whole business more efficiently. The investment would finance the Company's software development in Greece, and help the Company to further develop its CRM solutions for innovative automotive sales and after-sales processes.
EIA required:	no
Project included in Carbon Footprint Exercise ¹ :	no

Environmental and Social Assessment

Environmental Assessment

The investment concerns research, development and innovation activities for the company's proprietary software solution addressing the needs of the automotive retail sector spanning marketing, sales and after-sales processes for vehicle manufacturers, vehicle insurers and car dealerships. The purpose of this project is to assist the promoter in establishing and maintaining a research and software development hub in Greece.

The activities take place in existing locations and neither have any environmental impact nor do they require any environmental authorizations or an EIA as per Directive 2014/52/EU amending the EIA Directive 2011/92/EU.

OneDealer provides an all-in-one automotive software solution for automotive dealers of all sizes (importers, dealerships, OEMs and repair shops) to digitally transform and manage their business more efficiently. The objective is to provide a unified platform to optimise automotive sales and after-sales processes, along with tools to increase efficiencies and deliver an enhanced customer experience. By its nature, software development and implementation has little or no adverse impact on the environment.

Conclusions and Recommendations

Considering the above, the investment is acceptable for EIB financing in environmental and social terms.

¹ Only projects that meet the scope of the Carbon Footprint Exercise, as defined in the EIB Carbon Footprint Methodologies, are included, provided estimated emissions exceed the methodology thresholds: 20,000 tonnes CO₂e/year absolute (gross) or 20,000 tonnes CO₂e/year relative (net) – both increases and savings.
