B: PUBLIC CONSULTATIONS

Public consultations were carried out, three with the communities and one with the intuitions. The meetings with the affected people took place in the three bays, the first on 28 June in the Lagarto bays, the second in the morning of 29 June in the Ana Chave bay and the third in the afternoon of the same day in the Pantufo coastal area. The meeting for the intuitions took place on July 1, where besides the institutions, NGOs, hotels, restaurants etc. were also present. The number of participants are present in table below:

Public Consultation	Date	Local	N ^{er} . of Participants	
			Men	Women
Lagarto Bay	29-06-2021	"Tia Nanda" restaurant	10	15
Ana Chaves Bay	30-06-2021	Salon Piroca de San Pedro	11	27
Pantufo Bay	30-06-2021	National High School São Tomé	18	12
Institutions and Society in general	1- 07-2021	Centro Brasil São Tomé	8	3
TOTAL			47	57

Table 1. Participants in Public Consultation

A summary of questions and answers are presented in the following sections.

LAGARTO BAY

Question	Answer
Circulation and Access Impacts	
Marlete Conceição: I would like to know what the situation will be for the students who will have to go to school, since the road will be blocked by the works?	With the works it is true that there will be constraints, but the roads can be used for routes, the works will be carried out in such a way as to maintain circulation, even with the difficulties inherent in the works.
Elizete Silva: When construction begins, what will happen to the children who travel along the road?	The roads will not be completely blocked, only in specific cases and it will not take long. We will also create alternative routes
Marlene Conceição: Won't the barriers that they will put in the road prevent the access to the beaches?	Access to the beach will not be conditioned. There will always be access to the beach
Economic Impacts	
Maria de Fátima: I work from Monday to Sunday, selling fruit by the side of the road. With the construction work, what will my situation be, since I'm a single mother?	There is a plan that you will then make known, plans to resolve situations like this. Remember that we will have other moments when we can talk again.
Edney Fernandes: I am a fuel pump worker, I am sure that with the jobs the business flow will go down. I am worried about my job.	
Oswaldo Andrade: I am a motor-taxi, my profession will be very affected by the works, why don't they open another road during the works?	We will open another road, there will be constraints, but there will be circulation.
Zuleica Costa: Will construction companies hire women for their work?	We will not build it ourselves, we are the design and study team, but we can leave it as a recommendation.
Environmental Impact	
Erminaise: When the tide is high, the waves invade the road, I suggest you build barriers that prevent the seawater from reaching the road.	One of the purposes of the project is just that, coastal protection
Sandra: I wanted to know if the rehabilitation is from the square to the airport, the waterfront is in need of rehabilitation	The project contemplates these locations, the Reconstruction will be from Pantufo to the airport.

Question	Answer
Duration / quality of the works	
<p>Edney Fernandes: We often notice that there are very beautiful projects on paper, but when these projects are executed, one notices that nothing is as beautiful as it looks on paper</p>	<p>INAE - Normally the projects are made with all the details, what happens is that at the moment of execution, unforeseen events appear that lead the projects to suffer alterations, but these alterations should not be profound</p>
<p>Amâncio Semedo: How long will the works last?</p>	<p>The population will be notified of the works in their entirety, before the project begins</p>

Mr Osvaldo suggested that the road should be widened, but the INAE representative said that this depends. There are some conditions that may prevent the road from being widened, such as hotels.

The population was asked about issues related to the laundries, where they said that the laundries could be given better conditions, by creating bathrooms and other improvements. In the same way, it was also recommended to transfer the laundry that is located near Hotel Omali, to a place near CFAO Motor (a shop that sells car maintenance).

The lady fruit seller asked that a small kiosk be made like those in San Pedro Bay, as a way of giving the place more beauty and dignity.

ANA CHAVES BAY

Question	Answer:
Agnaldo Martis: The presence of the company makes me satisfied. I've never travelled here, but everyone who sees it says that the marginal road is very beautiful, only that the company that is doing the work should improve the work.	This is another project, and today we are here to present the work team and the project for coastal protection and Reconstruction of the marginal road. The project you are referring to is the Reconstruction works of national road EN1
Benvindo Lima: In order to carry out these works, will the fishermen and the women who sell the fruit be removed ?	We are still on the drawing board, so we can't talk about moving people or not. When things are ready we will send it to the government to decide. This work has coastal protection aspects. The fishermen should see this.
Benvindo Lima: I ask this question because normally the government takes decisions without consulting the population	The waves are breaking. We wanted to know the best thing we could do to improve your lives.
The issue of the sea entering the land is due to sand theft.	The problem is not only due to sand theft but also to climate change. But would you like to move to a place with better security?
Atanilza Martins: We are satisfied with where we are, if they take us away from here, where will they put us?	We are still studying
Solange Diogo: We have been selling here for a long time and we already have identified customers, if you take us away from here you would have to put us in a place where our customers easily come to us. Our customers come to us because they are looking for fish fresh from the sea.	You can continue to sell your fish, we will always find an alternative that does not harm your economic situation
Edite Soares: We have been selling here for 20 years, yet we are still harassed by the police here. We always keep the place clean and tidy. If they want to take us away from here the government has to find another solution.	You can rest assured. Before the government implemented projects without looking at the social aspect, not today. We are always concerned with the social issue. In addition, we will carry out a survey to understand things even better, we will go to each one and listen to each one in particular.
Neida da Costa: There is no toilet, you also have to look at the wind. Where we sell the fruit, we get a lot of wind. The other thing I didn't like is that we are selling fruit next to the fishermen.	INAE: We are really here to find out if you feel comfortable where you are or if you can recommend another place.

Question	Answer:
Bety: Where I am is fine. I can earn my income.	
Felismino: It's fine for me too. My concern is if they send us home, what will our situation be like.	INAE: We repeat again that we are not sending anyone home. Our intention is not to make people's lives worse. People will continue as they are or they will improve their lives.

PANTUFO COASTAL

Question	Answer:
Environmental Impact	
Neliza Pereira: There are several stranded ships in the bays, I think that in this project they should be removed. This will give a better view of the waterfront.	We will propose to withdraw these vessels
Rui Alves: There are sewers leading to the beaches. What will it be like?	The project has nothing to do with environmental sanitation
Jerciley Costa: A lot of rehabilitations have been done, but the trees have been destroying the rehabilitations they do. Will the trees be renewed?	Only the degraded trees will be cut down. The trees on the waterfront are part of the character of the islands.
Emerson Santos: I am a taxi driver from Pantufo, the village of Pantufo is degraded, I would like them to rehabilitate the centre of Pantufo.	It must be said that the project will only go as far as the crossroads in front of Milu Bonfim
Katy Nascimento Student: Won't the classes cause noise and disturb the classes? What about the buses, with the construction work, like where will we catch the school bus?	
Augusto: If there is a delay in the works, to whom will we turn to complain?	Means must be created where anyone can complain about the works
Carlos Menezes: I'm the owner of the petrol station and I've already done some containment works with my own resources to prevent the sea from entering the land and causing coastal erosion. But I would like that area in front of the Equador building to have an intervention as soon as possible, they could put some large stones there, there are some coconut trees there that are beautiful, but they are about to fall.	The project has a coastal protection aspect, which will take into account this issue.
OPAM - AC Ida: Usually large stones are placed to prevent the sea water from entering the land, but if there are beaches that only have sand, what measures will be taken?	This meeting is to hear from you about what you think of the project and to let you know your concerns about what you will be affected by during the implementation of the project.
Rui Alves: Isn't there anyone here representing the Navy, since they say they have authority over the coastline?	Direc. Environment: Consultations are being carried out, the studies have not yet been carried out, but there will be other consultations in which the Navy will be present

Question	Answer:
<p>OPAM - AC Ida: One of the things they could do to improve my condition is to do coastal protection works. My workshop will be affected if the sea continues to come inland.</p>	<p>One of the components of the project consists precisely in the intervention in coastal protection and</p>
<p>Circulation and Access Impacts</p>	
<p>OPAM - Ac Ida: I would like to know the consequences that the works would have. What would be the duration of the works, and how will the movement of students to and from class be affected, as I have children that I take to school?</p>	<p>In the environmental and social impact study, all details will be studied to ensure road safety</p>
<p>Marta Cruz: Many families walk along the waterfront it would be good if there were several zebra crossings along the waterfront.</p>	
<p>Economic Impact</p>	
<p>OPAM - AC Ida: Will there be compensation for those affected?</p>	<p>At the moment we cannot say.</p>
<p>Neliza Pereira: What worries me are the fish sellers, they use the waterfront for their livelihood. How will they be?</p>	<p>We have already had a meeting with them where we talked about various aspects around this. We will deal with it. Thank you for your concern.</p>
<p>Henda dos Santos Bar in front of the building. Ecuador. Where I am is where I earn my living, but if they have to move me to another location because of the works, it won't be a problem.</p>	

MEETING WITH INSTITUTIONS

Question	Answer.
<p>Arminda Bom Jesus MARAPA: This project has been discussed for a long time, I would like to thank you since it is a very important project. I would like to know if you only want to mitigate the problem of coastal erosion or also to widen the waterfront ?</p> <p>We have 1001 km², with erosion, the land is being disturbed.</p>	<p>INAE: When we talk about upgrading, we talk about improving the waterfront. Due to limited funding we are not going to widen the waterfront. What is certain is that what has been lost along the waterfront, we will certainly recover. If we notice well, the degradation has not lost the body of the road.</p>
<p>Arminda Bom Jesus MARAPA: It's a pity it's only that way, a way to prevent coastal erosion should be considered.</p>	<p>INAE: In the project there is a coastal protection aspect. We at INAE would also like to see the road widened, but due to funding, this is not yet possible.</p>
<p>Anastácio Quaresma Directorate of Tourism: For me, this project is very important. But I thought that we would be shown a drawing or a model so that we could see how the works would be. I think that if it were like this, it would give us a greater perception of things, and we would be able to know and issue better opinions on improvements. The other concern is that I would like to know if there is in this project the involvement of institutions such as DOPU (Directorate of Public Works and Urbanism), CST (Santo Tomé Telecommunications Company) and INAE (National Roads Institute). Normally works here are not done without cooperation from other institutions and this results in damage to the works. There should be cooperation with the DOPU (Directorate of Public Works and Urbanism), and you should even bring your own inspectors. You should also listen to EMAE (Empresa de Água e Eletricidade)</p>	<p>INAE: In this type of funding, inspectors will also be from international tenders.</p> <p>Consultant team: The public sounding had 3 sessions. The first was in Lagarto bay, 2nd session was in Ana Chaves bay and the 3rd was in Pantufo coast line. Why was this so? In order to be able to hear each stakeholder separately.</p>

Question	Answer.
<p>José Dias Dirç. das Pescas: This project will affect numerous fishing activities. Along the waterfront we have several anchorages. Will the fishermen who will be affected by the works be compensated?</p>	<p>The project had 3 stakeholder consultation sessions. The first was in Lagarto Bay, the second in Ana Chaves Bay and the third in Pantufo. Why? To listen directly to those affected, we were in s. Pedro and there we spoke directly to the fishermen, we listened and recorded all their concerns.</p> <p>INAE: In this project there are studies that provide for the compensation of affected people. It should be noted that compensation can be more than just financial. For example, it could be rewarding with new boats, improvement of the place where they practice their activities. It may be in other ways, but one thing is certain, we will not let people become poorer.</p>
<p>Daniel Chaves Repres. Capitania dos Portos: It is notable that the waterfront needs to be requalified, but I would like to know what specifically they intend to do. I would like there to be a graph showing what they are really going to do. For example, are they going to use a breakwater for coastal protection?</p>	<p>We will have a type of protection adapted to the type of section.</p> <p>INAE: you have to understand that the project has several phases, at this stage it is to collect subsidies.</p>
<p>José Mendes Hotel Omali: What I can see from the drawing you presented is that you are going to need space to carry out this project. But if you look at the hotel that I represent, there's not much space. I don't know how they are going to do it. In the Praia Hotel, it may be possible because it is further inland, but in the Omali Hotel I don't think it will be possible without changing the characteristics of the hotel.</p>	<p>Each section will have its own specific characteristics. We will adapt according to the particularities of the roads. We will certainly not affect the OMALI Hotel in a negative way, because what we want is not to make people worse, no, we want to make people's lives better with this project.</p>
<p>Anastácio Quaresma Direc. Tourism: I think that for this project, they should involve the Forestry Department. I remember when I was a child, along the waterfront they had trees that offered shade to people. Even on sunny days, people would walk, but they wouldn't feel tired. I think they should look at that issue.</p>	

Question	Answer.
<p>Gonçalo Trindade Nicon seguros: It is very important for us to be here. The institution I represent has had a lot of problems regarding access to our facilities. Our customers, due to the type of roads in São Pedro, have to go in the direction of Super Ckdo and only then return. There should be space for parking in that area.</p>	<p>INAE: Road is our specialty, we will put some roundabouts in that project. You have to realise that the waterfront we have today came from a project, so the project we will do will have to be better than the previous project.</p>
