## Environmental and Social Completion Sheet (ESCS)

### Overview

Project Name: ISTRA CAMPING SITE MODERNISATION  
Project Number: 2018-0358  
Country: CROATIA

The project concerned the modernization and development of the existing facilities and infrastructures of the Istra camping site operated by a leading local tourism operator. The project is geared mostly towards families with children and it is a follow-up operation of the Istrian Riviera Development project

### Summary of Environmental and Social Assessment at Completion

**EIB notes the following key Environmental and Social outcomes at Project Completion.**

No significant environment or social issues were noted.

The existing 2\* camping has been modernised. Construction works have been exclusively located within the existing boundaries of the 35 hectares site where the camping was already operating. The project's impacts at construction stage have been short-lived and reversible, at a level which is deemed acceptable.

The site renovation complies with city of Funtana's urban development plans for which an SEA had been conducted. No EIA or Natura 2000 assessment was required as confirmed by the Directorate for Environmental Assessment and Sustainable Waste Management of the Ministry for Environment and Energy.

The project is deemed to have had positive effects on the local employment since the vast majority of the total permanent staff of the hotel came from the city of Funtana and surrounding areas.

EIB is of the opinion, based on reports from the Promoter during monitoring, that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
