Environmental and Social Completion Sheet (ESCS)¹

Overview

Project Name:	Magyar Telekom Broadband Network Expansion
Project Number:	2018-0888
Country:	Hungary
Project Description:	The project concerned the roll-out of advanced broadband networks in Hungary. The new networks enable broadband services up to 1 Gbps. The measures included the upgrade of the promoter's existing cable TV network with the latest broadband technology as well as the expansion of the Fibre-to-the-Home network.

Summary of Environmental and Social Assessment at Completion

EIB notes the following Environmental and Social performance and key outcomes at Project Completion.

A major part of the project related to the installation of new fibre access lines (Fibre-To-The-Home) in different areas of Hungary. Such installations require trenching works on streets or on sidewalks including proper reinstatement works after completion. The cable network upgrades had limited impact as it related to a large degree to the replacement of electronic network components by more advanced ones but no civil works.

Summary opinion of Environmental and Social aspects at completion:

Considering the above, the project is acceptable for the Bank's financing in environmental terms.
