Environmental and Social Completion Sheet (ESCS)

Overview

Project Name:	MODERNISIERUNG KLINIKUM REGION HANNOVER
Project Number:	20140077
Country:	Germany
Project Description:	Rehabilitation, extension and new construction of a public hospital network in the region of Hannover, Lower Saxony.

Summary of Environmental and Social Assessment at Completion

EIB notes the following key Environmental and Social outcomes at Project Completion.

The project consists of the remodelling, refurbishment and extension of existing hospitals as well as the construction of a new facility with about 60 000 m² GFA to replace various outdated hospital buildings. The competent authority has issued all necessary permits. None of the sub-projects were subject to an EIA.

Prior to all works considering existing buildings, a study has been conducted to detect potentially harmful materials. With respect to the construction covered by this project, several materials have been detected and adequate measures have been included in the implementation of the works.

Overall the replacement and modernisation of the outdated buildings have improved hygiene and safety conditions. A significant reduction in energy is expected since the new and rehabilitated buildings have been designed according to high energy standards.

No significant environmental or social issues were noted.

Summary opinion of Environmental and Social aspects at completion:

EIB is of the opinion based on reports from the promoter that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
