Environmental and Social Completion Sheet (ESCS)¹

Overview

Project Name:	<i>Education Ville de Paris</i>
Project Number:	<i>2015 0421</i>
Country:	<i>France</i>
Project Description:	Construction and renovation of City of Paris colleges and schools, as well as a university building whose renovation is subsidised by the City.

Summary of Environmental and Social Assessment at Completion

EIB notes the following Environmental and Social performance and key outcomes at Project Completion.

None of the project component was subject to EIA process due to their technical characteristics and location. The Project sites were situated in most cases on existing school estates and were already within respective city and/or regional plans. The investments financed by this Project were planned, designed and implemented in accordance with the energy and environmental standards set by the Region for construction, which, at the time of appraisal, were in line with the standards requested by the French law. The investments placed an emphasis on increased resilience towards climate change risks, reducing energy consumption, reducing greenhouse gas emissions, reducing waste and increasing renewable energy generation. The Project supported investments to achieve these objectives whilst at the same time making improvements to the internal learning and working environment for the students and staff alike. No historic buildings were included in the final list of schools.

No significant environmental or social issues were noted during Project implementation.

Summary opinion of Environmental and Social aspects at completion:

EIB is of the opinion based on reports from the Promoter that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
