Environmental and Social Completion Sheet (ESCS)¹

Overview	
Project Name: Project Number: Country:	Derichebourg Recyclage & Economie Circulaire 2018-0889 France
Project Description:	The project concerns the financing of Derichebourg multi- annual investment program focusing on optimisation of its waste recycling activities. The main objective is to improve the recycling rate. This project has contributed to reinforce the core competitive strengths of Derichebourg in the recycling industry in France.

The project has contributed to achieving national recycling targets. In fact, France has set itself ambitious targets, notably to reduce the quantities of non-hazardous, non-inert waste admitted to landfill by 30% in 2020 compared with 2010, and by 50% in 2025. In addition, France was aimed to achieve 55% recycling of non-hazardous and non-inert waste by 2020 and 65% by 2025, and to reduce greenhouse gas emissions by 40% by 2030 compared with 1990 levels. In addition, the Energy Transition Law for Green Growth in France has led to a reduction in the number of tonnes accepted by the various non-hazardous waste storage facilities. The key objective of this operation was to support France to reach those targets.

Summary of Environmental and Social Assessment at Completion

EIB notes the following Environmental and Social performance and key outcomes at Project Completion.

The project is in line with the new national waste strategy known as the "*Grenelle Environnement*", the National Plan for Waste Prevention 2014-2020 (*Plan national de prévention des déchets 2014-2020*) aiming at reducing by 2020 the generation of waste in general to the waste levels recorded in 2010. In addition, a recycling rate of 65% for non hazardous waste by 2025 is being targeted. The plan also promotes initiatives aimed at strengthening the recycling performance.

The main environmental impacts have been mitigated through the compulsory use of "Best Available Technique" (BAT) for such equipment and by putting in place Industry-standard monitoring and control of pollutant missions.

"No significant environment or social issues were noted".

EIB notes the following key Environmental and Social aspects to be monitored during operations:
