Environmental and Social Completion Sheet (ESCS)¹

Overview

Project Name:	Tram-Reg-Bahn Innsbruck
Project Number:	2015-0444
Country:	Austria
Project Description:	Extension of the existing tram network in Innsbruck in Tyrol in Austria to replace the existing bus line O. This involves the construction of stretches of tram tracks adding up to an additional 12 km per direction, an additional stabling facility and the purchase of 20 new tram vehicles including the depot in Duilerstraße.

Summary of Environmental and Social Assessment at Completion

EIB notes the following Environmental and Social performance and key outcomes at Project Completion.

The Promoter has not reported any unexpected or significant negative impacts during the Project implementation.

At appraisal, the Competent Authority, Land Tirol (Abteilung Umweltschutz), screened out the project and no impacts on protected areas or species were expected due to its location in an urban built-up area. At appraisal, the building permit for the depot was outstanding and the Promoter undertook to inform the Bank on the progress. The depot was completed at the end of 2017 and the condition was considered fulfilled.

The project included components that enhance the public transport offer in Innsbruck, thus contributing to tackling environmental pollution and climate change mitigation. The project has improved the connectivity and quality of the public transport network within the Innsbruck urban area. The Promoter's analysis post implementation also suggests that mode shift from private cars has occurred in line with expectations with positive effects on the quality of the urban environment.

Summary opinion of Environmental and Social aspects at completion:

EIB is of the opinion based on reports from the Promoter, that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
