## Environmental and Social Completion Sheet (ESCS)

### Overview

Project Name:	POZNAN MEDICAL UNIVERSITY
Project Number:	20170825
Country:	Poland
Project Description:	The Project involved the design, construction and equipping of a new state-of-the-art medical simulations centre at the Poznan Medical University. The Project also included the construction of the new building for the Faculty of Pharmacy and the extension and rehabilitation of two university hospitals.

### Summary of Environmental and Social Assessment at Completion

**EIB notes the following Environmental and Social performance and key outcomes at Project Completion.**

The Project supported the necessary investments for the design, construction and equipment of i) the Medical Simulations Centre, ii) the new location of the Faculty of Pharmacy, iii) the extension and modernisation of the Heliodor Świącicki University Hospital (emergency ward) and the Przemienienie Pańskie Hospital (ophthalmic ward and genetic disease ward).

Hospitals, universities or research institutions of this kind are not specifically mentioned in the EIA Directive 2011/92/EU as amended by the EIA Directive 2014/52/EU, though the Project is covered by Annex II of the Directive in relation to urban development.

In respect to the Medical Simulations Centre, the construction works were carried out in an existing building and were covered by the building permit issued by the local authority on 30 December 2013. The Promoter confirmed that, according to the decision of the competent authority ref. OS-V.6220.183.2012 no EIA was needed for the construction works of the Collegium Pharmaceuticum. In regard to the remaining sites, the construction works were carried out next to existing hospitals in areas that are covered by an existing urban development plan. Therefore, no EIA was required for any of these schemes.

As the Project covered construction works within, or close to existing buildings, no significant impact was noted on the environment. Overall, the replacement of the outdated buildings improved energy efficiency as well as hygiene and safety conditions.

By enabling better coordination between departments within the different facilities, the Project enabled the introduction of better and more cost-effective methods for education and medical treatment and included beneficial elements in terms of social cohesion and protection.

No significant environmental or social issues were noted.

Luxembourg, 4 May 2025

**Summary opinion of Environmental and Social aspects at completion:**

EIB is of the opinion, based on reports from the Promoter during construction, that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
