Environmental and Social Completion Sheet (ESCS)

Overview

Project Name:	SIAH WATER TREATMENT AND SUPPLY MANAGEMENT
Project Number:	2017-0600
Country:	France
Project Description:	The project consisted of the expansion and upgrade of a wastewater treatment plant in the Val d'Oise department. The project fell within the 2017-2022 investment programme to modernise the integrated water service of the Syndicat SIAH, covering 35 municipalities within the Val d'Oise.

Summary of Environmental and Social Assessment at Completion

The Promoter is Syndicat Intercommunal pour l'Aménagement Hydraulique des Vallées du Croult et du Petit Rosne (SIAH) which is in charge of collecting and treating storm water and wastewater for 249,000 inhabitants in 35 municipalities in the Val d'Oise *Département* North of Paris.

The project concerned the capacity expansion and upgrade programme for the SIAH's single wastewater treatment plant located in Bonneuil-en-France, which had a capacity of 300,000 population equivalent (PE) and was put in service in 1997. Given the increase in the connected population since then, as well as the development of industrial and commercial facilities in the catchment area, the plant required modernisation to improve treatment performance and a capacity expansion.

EIB notes the following Environmental and Social performance and key outcomes at Project Completion.

After the expansion works, the plant's capacity reached 483,000 PE. The plant obtained the compliance certificate from the relevant state authority in June 2025.

Thus, the plant ensures continued compliance with the Urban Waste Water Treatment Directive 91/271/EEC and improves the quality of water bodies as required by the Seine-Normandie River Basin Management Plan (RBMP), implementing the requirements of the Water Framework Directive 2000/60/EC (WFD).

The project required an environmental permit which was obtained in June 2019 (*Arrêté interpréfectoral* n°2019/DRIEE/SPE/046). All contractual environmental obligations have been met.

Summary opinion of Environmental and Social aspects at completion:

EIB is of the opinion based on reports from the promoter and site visits by the EIB team that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
