

Environmental and Social Data Sheet

Overview

Project Name: *SID energy efficiency and renewables*
 Project Number: *2012-0293*
 Country: *Slovenia*
 Project Description: *Framework loan to co-finance investments in the sector of energy efficiency and renewable energies carried out both by public and private entities as well as natural persons.*

EIA required: Certain schemes might fall under Annex II of the EIA Directive and could be subject to EIA. The Promoter will ensure compliance with the relevant Directives.

Project included in Carbon Footprint Exercise¹: no

Summary of Environmental and Social Assessment, including key issues and overall conclusion and recommendation

The environmental impact of most of the energy efficiency and renewable energy investments targeted by the project is likely to be limited, with no significant negative residual effects. They will generally generate positive environmental impacts, notably by reducing GHG emissions. Due to their technical characteristics, however, some of the investments may fall under Annex II of the EIA-Directive 1997/11/EC, leaving it to the competent authority to decide whether or not an EIA is required. Energy efficiency schemes might also be made subject to an environmental impact assessment under Annex II.

The environmental capacity of the Promoter has been assessed by the Bank as satisfactory. The promoter will ensure compliance with national and European environmental and nature regulations and facilitate the access by the public to environmentally relevant information in accordance with the Bank's Transparency Policy. In case any of the sub-projects qualify for an EIA the promoter shall make the relevant NTS available to the Bank for publication. The criteria to be considered by the Promoter concerning compliance with the Bank's environmental requirements will be defined in the finance contract, including on the sustainability of biomass feedstock. The Promoter will also be required to verify that none of the schemes submitted for part-financing by the Bank have a significant negative impact on any site of nature conservation importance (Habitat, Natura 2000). The promoter will be required to provide confirmation to this effect from the competent authority.

Under these terms, it is considered that any environmental issues of individual sub-schemes will be appropriately assessed by the Promoter and thereby ensure compliance with the Bank's standards.

PJ/ECSO 18.04.13

¹ Only projects that meet the scope of the Pilot Exercise, as defined in the EIB draft Carbon Footprint Methodologies, are included, provided estimated emissions exceed the methodology thresholds: above 100,000 tons CO₂e/year absolute (gross) or 20,000 tons CO₂e/year relative (net) – both increases and savings.
