

## Environmental and Social Completion Sheet (ESCS)

### Overview

Project Name:	BMW LEIPZIG III
Project Number:	2011-0503
Country:	Germany
Project Description:	The project concerned the promoter's investments at its Leipzig plant for the production of: (i) a new compact multi-purpose vehicle (MPV), available in conventional (Internal Combustion Engine) and plug-in-hybrid variants; (ii) a new carbon-fibre-based vehicle, available in electric and range extender variants. All investments concerned the activities to be carried out in Leipzig, between 2012 and 2015.

### Summary of Environmental and Social Assessment at Completion

**EIB notes the following key Environmental and Social outcomes at Project Completion.**

No significant environment or social issues were noted.

The process deployed for the production of the new electric vehicles achieved the environmental targets set at appraisal, namely significant reduction of energy and water use as well as of the noise level in the body shop, as compared to the production process for a conventional vehicle. In addition, all the electricity used in the process for the production of the new electric vehicles is generated from renewable sources.

#### **Summary opinion of Environmental and Social aspects at completion:**

EIB is of the opinion, based on reports from the promoter, that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
