

Environmental and Social Completion Sheet (ESCS)

Overview

Project Name:	SW DEVON WASTE-TO-ENERGY CHP PLANT
Project Number:	2011-0488
Country:	United Kingdom
Project Description:	The Project concerns the design, construction, operation and maintenance of a waste incineration plant with energy recovery in Plymouth for treatment of residual waste from the South West Devon area.

Summary of Environmental and Social Assessment at Completion

EIB notes the following key Environmental and Social outcomes at Project Completion.

The plant is built relatively close to residential buildings, and the Project Company has therefore designed the plant in a visually appealing manner and established green areas between the plant and the residential houses.

During the testing period, there were complaints made from neighbours regarding perceived noise and odour. These issues were effectively addressed, with a few remaining issues planned to be addressed during a maintenance period planned for September 2017.

No other significant environmental or social issues were noted during the implementation.

Summary opinion of Environmental and Social aspects at completion:

EIB is of the opinion based on reports from the promoter during Construction that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
