

## Environmental and Social Completion Sheet (ESCS)

### Overview

Project Name: Academisch Ziekenhuis Maastricht  
Project Number: 2012-0299  
Country: Netherland  
Project Description: Extension, improvements and refurbishment of the University Hospital in Maastricht under the investment programme 2010-2015

### Summary of Environmental and Social Assessment at Completion

**EIB notes the following key Environmental and Social outcomes at Project Completion.**

No significant environment or social issues were noted.

One component of the project was the modernization of the hospital's power plant. To supply the hospital with thermal energy and electricity, the hospital has been equipped with new a combined heat and power plant running on natural gas. While under normal circumstances this plant is regulated according to the thermal demand, the plant functions as the emergency power supply in case of power cut and the usage of diesel generators can be reduced.

The refurbished facilities allow the hospital to improve hygiene and safety conditions within the hospital while the modernised power plant can be operated with significantly reduced emissions.

#### **Summary opinion of Environmental and Social aspects at completion:**

EIB is of the opinion based on reports from the promoter including a site visits by the EIB team during construction that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
