Luxembourg, 21.02.2019

Environmental and Social Completion Sheet (ESCS)

Overview

Project Name:	VIOTIA WIND PARKS
Project Number:	2016-0077
Country:	Greece
Project Description:	Construction and operation of a 48.6MW onshore wind park portfolio comprising three wind farms located in the wider Tanagra municipality in Viotia, Greece.

Summary of Environmental and Social Assessment at Completion

EIB notes the following key Environmental and Social outcomes at Project Completion.

The project comprised three wind farms with a total installed capacity of 48.6 MW in Viotia (Greece). The construction was completed in 2017 and all 3 sub-projects were set in operation.

The Environmental Impact Assessments (one for each wind farm, including the ancillary facilities) as well as the relevant environmental permits were reviewed during the appraisal process of the Bank and were found acceptable (as reported in the Environmental and Social Data Sheet for this operation).

According to information received by the Promoter, the reforestation works (on public land) envisaged in the environmental permits obtained for the wind projects is planned to take place in the next planting season (October 2019-March 2020). The original reforestation area indicated by the Forestry Authority for two of the wind farms was naturally reforested in some parts. Therefore, the reforestation studies were updated and submitted in Q4 2018 to the competent Forestry Authority, the approval of which is expected in the forthcoming months.

No significant environmental or social issues were reported by the Promoter during the implementation of the project.

Summary opinion of Environmental and Social aspects at completion:

EIB is of the opinion based on reports from the Promoter, that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
