Environmental and Social Completion Sheet (ESCS)

Overview

Project Name:	TURK TRAKTOR RDI
Project Number:	2014-0223
Country:	TURKEY
Project Description:	The project concerned a selection of the promoter's research, development and innovation (RDI) investments within four years, related to the design and testing of tractors and agricultural equipment.

Summary of Environmental and Social Assessment at Completion

EIB notes the following key Environmental and Social outcomes at Project Completion

The project activities have been carried out in existing R&D facilities that have not changed their already authorised scope due to the project; the project comprised also, partly, investments in test benches and lab equipment; the promoter has confirmed that no EIA, has been required for these project components.

The project has contributed to increasing the promoter's knowledge and know-how in the field of more efficient and better performing tractors, reduced emissions and agricultural machinery with improved performance; it has therefore led to increased fuel efficiency and reduction of CO₂ of the promoter's products, thus with positive environmental benefits.

Summary opinion of Environmental and Social aspects at completion

EIB is of the opinion based on the reports from the promoter during the implementation that the Project has been implemented in line with the EIB Environmental and Social Standards, applicable at the time of appraisal.
